

## Why XtraCare™?

The safety and peace of mind of your residents is perhaps the most important aspect of the care you provide. With that in mind, why not provide residents with a personal emergency transmitter that works anywhere in their room?

Of course price is a concern so replacing your entire emergency call system may not be practical. But there is a cost-effective way to provide better emergency response coverage and reduce liability: XtraCare.

This innovative product allows you to easily convert an existing hard-wired nurse call system into a flexible wireless emergency call system.

## XtraCare Features

- Residents can request assistance from *anywhere* in their room with just a push of a button
- A red light on the face of the pendant transmitter confirms activation
- Water resistant PET can be worn around the neck or on the wrist
- Wall mounted receiver unit can be installed in minutes with hand tools

## How Does XtraCare Work?

By mounting a battery-operated radio frequency receiver unit on the pull-cord panel and using a lightweight (1 oz.), battery operated Personal Emergency Transmitter (PET), a call for help can be initiated by a resident from anywhere in his/her room.

### Receiver Size: 4.5" x 2.5" x 1"

### PET Size: 1.4" x 1.5" x 0.5"

## About Care Technologies

Care Technologies (CTI) is a leading manufacturer of intelligent wireless emergency response and monitoring systems for the senior housing and long term care markets. With hundreds of installations nationwide, CTI is recognized for its experience and expertise in using innovative technology to meet the emergency response needs of its clients.
